

JUAN MIGUEL CERDA ORDAZ

Software Engineer | Technical Lead | Co-Director

I specialize in high-performance **games**, **interactive systems**, and **AI implementations**. With a proven track record in steering cross-platform projects from concept to **award-winning** releases and architecting autonomous AI agent swarms for **medical bio-simulations**, I excel at bridging creative mechanics with robust engineering. Experienced **leading multidisciplinary teams**, defining clean code paradigms, and solving complex challenges across **game engines** and **scalable software**.

PERSONAL ACHIEVEMENTS

- **Grand Prize Winner – Supernova Game Challenge (2025):** Led the engineering and co-direction of **Heaven Crawler** to secure the event's top award; successfully managed and reinvested the prize capital to scale the development team.
- **Co-Directed & Tech-Led Multi-Platform Projects:** Engineered systems for titles selected and showcased at premier global industry events, including Gamescom and the Latin American Game Showcase.
- **Featured Developer – Nvidia GPU Technology Conference (2021):** Developed a custom graphics engine utilizing Nvidia Omniverse support.
- **Technical Speaker – Jalisco Talent Land (2023):** Shared professional expertise in game engineering, optimization paradigms, and independent studio development.

EDUCATION

B.S. in Game Development Engineering – Universidad de Artes Digitales (2018 - 2021)

EXPERIENCE

Critical Slash 2019 - 2026

- Founded an independent studio to develop **Heaven Crawler** and various experimental indie titles while studying and working.
- Initially **solo-developed** Heaven Crawler, scaling it to a full-featured, playable experience.
- **Partnered with Carbon Machina Studio** in 2024, expanding to a full development team to scale Heaven Crawler for professional release.
- Heaven Crawler was selected and showcased at premier industry events including **Gamescom**, **Latin American Game Showcase**, and the **Supernova Games Challenge**.

Carbon Machina 2021 - 2026

Lead Programmer & Co-Director.

Led a multidisciplinary engineering team programming core features, advanced AI behavior, game feel, UI systems, and editor tools in Unity and Unreal.

Collaborated directly with artists and designers to design and implement efficient, automated 2D/3D asset pipelines.

Universidad de Artes Digitales 2022 - 2023

Professor of Video Game Prototyping

Instructed advanced students on rapid prototyping techniques, core gameplay loops, production mechanics, and clean code architecture in Unity.

Bowhead Health & Good Place Games OÜ 2022 - 2026

- **Medical AI & Research:** Engineered an AI Agent Swarm system for medical research, featuring a 3D Virtual Lab to visualize real-time agent interactions and behavior.
- **Bio-Simulations:** Developed specialized simulations for cell behavior and **cancer research** using advanced data-driven programming.
- **XR & Emerging Tech:** Programmed health-related applications and interactive simulations for Apple Vision Pro and mobile platforms.

SKILLS

- **Languages:** C#, C++, Python, JavaScript/TypeScript
- **Engines & Tools:** Unity, Unreal Engine, Git, Custom Engines
- **Specialties:** Core Gameplay Engineering, Systems Architecture, AI Behavior, AI Agent Swarms
